

Work package number	2	Lead beneficiary			DNNERC
Work package title	Development of the evaluation framework				
Partner number	1	2	3	4	5
Short name of Partner	DNRC	FMB	RAI	PMBA	EVIP
Daily Unit Costs per Partner	120	12	12	12	12
Start month	1		End month	36	

Objective(s):

Objectives

O2.1 Establish proof of concept evaluation framework adopting Participatory Action Research methods, clearly illustrating the benefits of the emancipatory educational programmes implemented throughout the project life cycle.

O2.2 Monitoring agreed outputs the framework will ensure all project partners position marginalised learners and excluded communities centrally in the co-creation and delivery of community based mental health and substance use programmes to meet locally identified needs across all programme sites within the timelines set.

O2.3 Amalgamate data form across all learning sites. Findings will be presented in proof of concept report using Human Rights, Recovery Education and Community Development indicators

O2.4 Proof of concept report disseminated, demonstrating programme feasibility and impact with a view to realising programme sustainability beyond the scope of the Erasmus+ funded project life cycle, embedding this community model of work within policy and practice to support individuals and communities marginalised because of mental health and substance use.

Description of work

DNRC is the partner primarily responsible for the coordination and implementation of the proof of concept evaluation framework with contributions from all programme partners.

T2.1 DNRC to lead with input from all partners in the development of the evaluation framework, which will gauge learner's experiences across all participating programme sites, over the duration of the project life cycle. Adopting Participatory Action Research methods, this framework will include:

- A. Evaluations of programmes delivered during the implementation phase of the project include all '*Recovery: Learning Together Training for Trainer*' programmes and the subsequent sets of '*Mental Health Wellbeing Programmes*,' designed and delivered by participating stakeholder groups across all programme sites.
- B. Open dialogue groups with local stakeholders across all programme sites will be carried out at the end of the implementation stage of the project. These dialogical spaces will offer participants the opportunity to critically reflect on learning processes collectively.
- C. Comprehensive whole project quantitative and qualitative measures will be completed by participants that took part in two or more participatory outputs over the course of the project life cycle including programming during the implementation phase, open dialogue meetings, transnational meetings and multiplier events.

T2.2 Coordinating Data collation and analysis. *DNRC* lead with all partners to collate complete and relevant data, across all stages of the project lifecycle, ensuring timelines and key milestones are met. *DNRC* will provide all partners with a cohesive support service ensuring evaluation and research tasks are systematically and clearly delegated to each programme partner. Data collation updates will be presented regularly during all core project meetings

T2.3 Findings amalgamated and presented in end of project, proof of report ensuring all evaluative feedback and critically reflective communications (quantitative, qualitative, dialogical) with participating learners are incorporated in the findings in a cohesive and accessible format. Stakeholder contributions (face to face, digital and virtual) across all programme sites will be situated within a series of themes linked directly to Human Rights, Recovery Education and Community Development Indicators. These themes in turn will inform proof of concept recommendations to be made to relevant policy makers and funders.

Deliverables

D2.1 Evaluation Framework Developed (M7) and (M14)

D2.2 Data from all programming collated and analysed (M22) and (M28)

D2.3 Findings amalgamated (M28) and presented in end of project, proof of concept report for wider dissemination (M33)
